OTIS

About This Catalog

This catalog lists many of the printed circuit boards that can be purchased, repaired, or exchanged by the Otis Electronics Shop at the Otis Service Center in Bloomfield, Connecticut.

It also contains some of the related electronics the E-Shop repairs, such as contactors, heat sinks, and drives.

There is a chapter for each elevator manufacturer for which boards are available, and they are presented alphabetically. Within the longer chapters, there are subsections for each elevator/escalator system, which are also in alphabetical order. For each part number that is provided, a brief description is given along with any related part numbers (alternate, substituted, or superseded numbers). In most cases, the system on which the board is used is given, and many of the listings are accompanied by a photo of the board.

Subsequent revisions of this catalog will feature additional photos and enhanced descriptions.

Note that a great many PC boards have their part number stamped on the board itself, or applied via a label. For those used on non-Otis systems, our Otis part numbers are the manufacturer's part number preceded by a company prefix (such as WEST for Westinghouse). Refer to the note below for further information.

Terminology & Symbols

Part Number: The part number you will use to order the part from OSC.

Description: PCB description.

Alt/Sub/Sup P/N: Any alternate, substituted, or superseded part numbers for this board.

* An asterisk designates boards that can currently be repaired only, and are not available for purchase or exchange.

NOTE: OSC lines up non-Otis boards using the original manufacturer's part number with an OEM prefix assigned by OSC (e.g., DOVR9715710). Refer to TIP 50.0-1, *SDC Competitor Prefixes* for a complete listing.

Choice...

Exchange

Reducing downtime is the most critical component of quality elevator service. Exchanging your PC board is the most efficient and cost-effective method to get an elevator back in service quickly. Place an exchange order with OSC and a replacement board is delivered overnight. Ship the old PC board to OSC and receive a credit, as long as it can be repaired. The exchange program helps to handle PC board obsolescence, manage OSC inventory more efficiently, and ensure that active Otis boards remain with Otis throughout their life cycle.

Repair

OSC's PC board process includes troubleshooting, replacing defective components, and testing. Our in-circuit, functional, and simulator testing capabilities help ensure your board is fixed right the first time. To identify quality issues, all defective PC boards should be returned using a code 31 return authorization.

Purchase

Available PC boards are also available for purchase.

Repairs & Exchanges Help You and Environment

By sending old PC Boards and other repairable electronics to the OSC E-Shop for repair/exchange, you saved the company \$16 million dollars over the cost of simply buying new boards in 2008. Not only that, but you've done a great thing for the environment. By "e-cycling" your electronics, you keep nearly 1500 parts out of landfills each month—that's more than 250,000 parts in the last 20 years. These electronic parts are especially bad in landfills because they contain lead, cadmium, mercury, beryllium, nickel, zinc, and brominated flame retardants. If not properly "e-cycled" these toxic materials present serious environmental issues in landfills and even underlying water sources. So make sure to take full advantage of the repair and exchange options the OSC E-Shop offers and you'll be helping the company stay competitive (which helps your bottom line) and helping preserve our Earth for your children.
